The policy of the Board of Governors is to contribute to economic development by providing applied research and development, technology transfer and pre-commercialization services to industry customers and partners in areas of institute expertise.

PROCEDURE

DEFINITIONS

Applied research agreements
Contracts made between SAIT and another party in support of applied research at SAIT, and may be the result of utilizing SAIT's facilities, funds or resources (excluding SAIT's library e-resources). These contracts include but are not limited to non-disclosure agreements, confidentiality agreements, revenue sharing agreements, technology disclosure agreements and applied research service agreements. Templates for these agreements can be found by contacting the Business Services Unit of the Corporate Development, Applied Research and Innovation (CDARI) division.

Applied research and development
Activities that move concepts from the theoretical, conceptual stage to the commercialization stage, usually by engaging in proof of concept, prototype development, testing and validation activities.
Pre-commercialization
Activities associated with pre-competitive development, where the technical feasibility of the product or process has already been established and it can be demonstrated that the product or process could reasonably be expected to work and be successful in the marketplace.

Technology transfer
The transfer of ideas, information, methods, procedures, techniques, tools or technology from the developers to potential users.

Tri-Agency
Three federal government funding agencies that support Canadian research, including the Canadian Institutes of Health Research (CIHR), Natural Sciences and Engineering Research Council of Canada (NSERC) and the Social Sciences and Humanities Research Council of Canada (SSHRC).

GOVERNING PRINCIPLES

1. The services of SAIT’s Applied Research and Innovation Services (ARIS) department will be based on:
   a) Institute resources, including SAIT’s facilities and the knowledge and expertise of its employees and students but excluding SAIT’s library e-resources;
   b) Relevance to academic program offerings; and
   c) Funds and support.

   SAIT’s Centres of Excellence will provide a focus for these services.

2. Services will be funded primarily outside base operating grants, and funding will come from sources such as government agencies, foundation or industry grants, and customer contracts.

3. Services will concentrate on those that complement the pure research activities of organizations such as universities, the Alberta Research Council, the National Research Council, University Technologies International, Calgary Technologies Inc. and TRLabs. These services will include beta testing, proto-typing and application/product modeling. ARIS will encourage collaborative work with other educational institutions, government

agencies and companies that are involved in the applied research and development process and that will benefit from our partnership.

4. Tri-agency operating grant funds will not be used for construction, renovation, moving, or rental costs of research facilities including laboratories.

5. Ownership of all intellectual property rights resulting from applied research and development, technology transfer and pre-commercialization services will be retained by the customers, the institute and partners concerned and shall be assigned as specified in each service contract, and shall be subject to procedure AC.2.11.1 Intellectual Property.

PROCEDURE

1. ARIS has created a detailed departmental process for processing and managing applied research projects. This process, which shall be followed by those involved in applied research projects at SAIT, is available by contacting ARIS. This process may be reviewed and amended, from time to time, by the director of ARIS or designate.

2. Any applied research agreements relating to applied research and development, technology transfer and/or pre-commercialization will be coordinated through the office of the director, ARIS.
