Chemistry 10 Placement Test

Study Guide

Updated: June 2015

Important Information about this Study Guide and the Placement Test

This study guide is designed to prepare students for the Academic Upgrading Chemistry 10 Placement test. An answer key is included at the end of this guide.

It is designed for Academic Upgrading placement purposes only. **This test may not be used for admission to any SAIT program; that is, this is not a SAIT admission exam. In addition, the results cannot be used at any other educational institution.**

The time allotted for the Chemistry 10 Placement test is 1 hour. The test consists of 20 questions and covers the chemistry material from Science 10. A mark of 60% is required to pass and allows entrance into CHEM 181.

Note: CHEM 181 is equivalent to Chemistry 20.

CHEM 181 is accepted as an admission requirement at other post-secondary institutions in Alberta, but you should always check with the post-secondary institution you are interested in attending (if it is not SAIT) to confirm it will accept the course.

SAIT Academic Upgrading Course Sequence

Introduction: Chemistry 10 Study Guide

- Review the practice exercises. You may use the solubility table and the periodic table of elements as provided at the end of the guide.
- Check your answers with the answer key provided at the end of this guide.
- You may choose to utilize a Science 10 Study Guide from the Calgary Public Library or bookstore for extra review. Make sure you focus on the chemistry chapters from such guides.
- A data booklet including the periodic table will be provided.
- You may require a pen and paper for calculation-based questions.

Multiple Choice

- John Dalton proposed four ideas in his model of the atom. Which of the following is **not** part of his model?
 - all matter is made of small indivisible particles
 - atoms of different elements have different properties
 - atoms are never created or destroyed during a chemical reaction
 - all the atoms of an element are identical in properties such as size and mass
- A certain chemical family is composed of elements that are soft, shiny, very reactive with water, and form ions with a charge of $1+$. This family could be
 - the halogens
 - the noble gases
 - the alkali metals
 - the alkaline-earth metals
- Which column in the periodic table contains elements with one electron in their valence energy level?
 - first on the left
 - first on the right
 - second from the left
 - second from the right
- Which two particles are approximately equal in mass?
 - proton and neutron
 - proton and electron
 - neutron and electron
 - none of these
- The magnesium ion, Mg^{+2} , has
 - 10 electrons and 10 protons
 - 10 electrons and 12 protons
 - 12 electrons and 10 protons
 - 12 electrons and 12 protons
- An atom of fluorine has 9 protons, 10 neutrons, and 9 electrons. Its mass number is
 - 9
 - 10
 - 18
 - 19

7. What is the formula for sodium carbonate?

- a) $\text{S}_2\text{CO}_{3(s)}$
- b) $\text{NaCO}_{(s)}$
- c) $\text{Na}_2\text{CO}_{3(s)}$
- d) $\text{Na}_3\text{CO}_{3(s)}$

8. What is the formula for aluminum hydroxide?

- a) $\text{AlOH}_{3(s)}$
- b) $\text{Al}_3\text{OH}_{(s)}$
- c) $\text{Al}(\text{OH})_{3(s)}$
- d) $\text{Al}(\text{III})\text{OH}_{(s)}$

9. Which of the following is an ionic compound?

- a) $\text{HCl}_{(aq)}$
- b) $\text{KCl}_{(s)}$
- c) $\text{ClO}_{3(g)}$
- d) $\text{NCl}_{3(g)}$

10. Which of the following properties are characteristic of an ionic compound?

- I It is malleable.
- II It is solid at room temperature.
- III Its solution conducts electricity.

- a) I and II only
- b) I and III only
- c) II and III only
- d) I, II, and III

11. Which of the following are very soluble?

- I Na_2S
- II CuBr
- III $\text{Sr}(\text{OH})_2$

- a) I and II only
- b) I and III only
- c) II and III only
- d) I, II, and III

12. Which of the following is a general property of bases?

- a) taste sour
- b) turn litmus red
- c) conduct electricity
- d) react with Mg to produce hydrogen bubbles

13. Which of the following is an acid?

- a) $\text{CH}_4(g)$
- b) $\text{K}_3\text{PO}_4(aq)$
- c) $\text{H}_3\text{PO}_4(aq)$
- d) $\text{NaOH}(aq)$

14. Consider the following reaction:

The coefficient for $\text{Al(NO}_3)_3$ when the above equation is balanced is

- a) 1
- b) 2
- c) 3
- d) 4

15. The following reaction takes place when gasoline reacts with air:

This reaction is

- a) single replacement reaction
- b) double replacement reaction
- c) hydrocarbon combustion reaction
- d) decomposition reaction

Section II. Skills

Name or give the formula for each compound in questions 24 to 33. (1 mark each)

16. $\text{CaBr}_{2(s)}$

17. $\text{Au}_3\text{PO}_4(s)$

18. $\text{N}_2\text{O}_{4(g)}$

19. $\text{NH}_3(s)$

20. $\text{H}_2\text{SO}_4(aq)$

21. lead(IV) sulfide

22. methane

23. sulfur trioxide _____

24. hydrochloric acid _____

25. iron(II) nitride _____

Section III. Written Response

Balance the equations in questions 31, 32, and 33.

Predict the formulas of the products for each reaction below and WRITE them in the spaces provided, but do NOT balance the equations. Also, state the FULL name of the reaction type for each reaction.

	Products	Reaction Type
29. $\text{Na}_{(s)} + \text{Br}_{2(l)} \rightarrow$	_____	_____
30. $\text{CH}_{4(g)} + \text{O}_{2(g)} \rightarrow$	_____	_____
31. $\text{Al}_{(s)} + \text{CuCl}_{2(aq)} \rightarrow$	_____	_____
32. $\text{NaI}_{(aq)} + \text{Pb}(\text{NO}_3)_{2(aq)} \rightarrow$	_____	_____

Write balanced formula equations for the reactions in questions 33 and 34.

33. Aqueous ammonium sulfide and aqueous lead(II) nitrate are mixed together. They react to yield aqueous ammonium nitrate and solid lead(II) sulfide.

34. Copper metal is placed in a solution of silver nitrate. This produces aqueous copper(II) nitrate and silver metal.

35. The element nitrogen has two common isotopes: nitrogen-14 and nitrogen-16.

- State how these two types of atoms are similar.
- State how these two types of atoms are different.

Chemistry Answers

Section I. Multiple Choice

1. c
2. c
3. a
4. a
5. b
6. d
7. c
8. c
9. b
10. c
11. b
12. c
13. c
14. a
15. c

Section II. Skills

16. calcium bromide
17. gold(III) phosphate
18. dinitrogen tetroxide
19. ammonia
20. sulfuric acid
21. $\text{PbS}_{2(s)}$
22. $\text{CH}_{4(g)}$
23. $\text{SO}_{3(g)}$
24. $\text{HCl}_{(aq)}$
25. $\text{Fe}_3\text{N}_{2(s)}$

Section III. Response

26. 4, 1, 2
27. 1, 12, 8, 8
28. 4, 5, 4, 6
29. $\text{NaBr}_{(s)}$ formation
30. $\text{CO}_{2(g)} + \text{H}_2\text{O}_{(g)}$ hydrocarbon combustion
31. $\text{AlCl}_{3(aq)} + \text{Cu}_{(s)}$ single replacement
32. $\text{NaNO}_{3(aq)} + \text{PbI}_{2(s)}$ double replacement
33. $(\text{NH}_4)_2\text{S}_{(aq)} + \text{Pb}(\text{NO}_3)_2_{(aq)} \rightarrow 2 \text{NH}_4\text{NO}_3_{(aq)} + \text{PbS}_{(s)}$
34. $\text{Cu}_{(s)} + 2 \text{AgNO}_3_{(aq)} \rightarrow \text{Cu}(\text{NO}_3)_2_{(aq)} + 2 \text{Ag}_{(s)}$
35.
 - a) Both atoms have the same number of protons or atomic number.
 - b) One has 7 neutrons and the other has 8 neutrons. Their mass numbers are different.

Chemistry 10 Placement Test Data Booklet

Solubility of Some Common Ionic Compounds in Water at 25°C
